

GERMIPROTECT

STIMULATES SEED GERMINATION

ORGANIC FERTILIZER FOR HOME

HOME LINE

SHAKE WELL BEFORE USE!

GermiProtect owned by Microendo Inc., is a biostimulant for seed germination that works through the action of a microbial consortium, whose effect is based on the production of phytohormones that stimulate germination, as well as leaf and root development in the early stages of the plant's life. **GermiProtect** ensures a high-quality product, harmless to humans and beneficial for the environment, ideal for all types of agricultural, fruit, and ornamental crops, providing you with a 100% organic solution in a more logical and natural way for the environment.

BENEFITS

- Stimulates germination.
- Increases root development and the number of leaves in the early stages of the plant.

BIOLOGICAL COMPOSITION

Enterobacter spp. 1×10^9 UFC/ml

APPLICATION METHOD

GermiProtect comes from a fresh and metabolically active culture, so its use is recommended upon receipt. Apply early in the morning or during the afternoon, avoiding long hours of sunlight and solar radiation. The product is applied by spraying it onto the seeds before planting, setting the sprayer nozzle to SPRAY mode. Do not eat, drink, or smoke during application; wash your hands before and after using the product.

APPLICATION FREQUENCY

It is recommended to make 3-5 applications for optimal colonization of the plant, with a frequency of 5 days each.
